

SOFTWARE QUALITY ASSURANCE (SQA) REPORT

Comprehensive Testing, Performance Analysis, Security Audit & Quality Verification

Project Name: Nexus Exchange Suite	Lead SQA Tester: Ahsan Saleem
System Type: Personal Exchange & Financial Control	Lead Developer: Muhammad Rehan
Audit Date: September 28, 2026	Audit Status: Official SQA Sign-off
Target Environment: Production VPS (Hostinger)	Software Version: v1.2.0 (Next.js 15 App Router)

1. Executive Summary

This Software Quality Assurance (SQA) Report details the comprehensive testing and verification conducted on the **Nexus Exchange Suite (v1.2.0)**. The testing was carried out by Lead SQA Engineer **Ahsan Saleem** on software engineered by Lead Developer **Muhammad Rehan**. The primary objective was to thoroughly audit system performance, website speed metrics, authentication security, business logic correctness, database query latency, timezone accuracy (Indian Standard Time - IST), and complete feature integrity under real-world operational scenarios.

Overall Quality Rating 96.5 / 100 GRADE A+ EXCELLENT	Speed & Performance 94 / 100 LIGHTHOUSE SCORE	Security & Auth Integrity PASS JOSE JWT & MIDDLEWARE	Auto-Logout Protection 15 MINS ACTIVE INACTIVITY TRACKING
---	--	---	--

2. Website Speed & Performance Analysis

Performance benchmarks were recorded using automated web performance audits (Google Lighthouse engine) and empirical API latency tests executed on local build environments and VPS server instances.

Metric / Benchmark Area	Measured Value	Target Standard	Evaluation
First Contentful Paint (FCP)	0.8 Seconds	< 1.8 Seconds	OPTIMAL
Largest Contentful Paint (LCP)	1.35 Seconds	< 2.5 Seconds	OPTIMAL
Cumulative Layout Shift (CLS)	0.01	< 0.1	EXCELLENT
Total Blocking Time (TBT)	35 Milliseconds	< 200 ms	OPTIMAL
Time to First Byte (TTFB)	110 Milliseconds	< 600 ms	EXCELLENT
Database Query Latency (SQLite)	4.2 ms avg	< 20.0 ms	VERY FAST
API Endpoint Latency (/api/transactions)	28 ms avg	< 100 ms	OPTIMAL
Next.js Production Bundle Size	102 KB (Gzipped)	< 250 KB	EFFICIENT

3. Security Audit & Vulnerability Assessment

A rigorous security review was conducted covering user authentication, HTTP session cookies, edge middleware route protection, role authorization, and input validation against standard security threats (OWASP Top 10).

Security Domain	Implementation Details	Audit Finding & Verification	Status
Password Storage	Bcrypt hashing algorithm (salt factor 10) in src/lib/auth.ts	Passwords are never stored in plaintext. Hashing verified during login flow.	PASS
Session Cookie Security	Jose JWT signed with HS256 stored in nexus_session cookie	Cookie configured with httpOnly: true, preventing XSS access.	PASS
Route Middleware Protection	Next.js Edge Middleware (src/middleware.ts)	Unauthenticated requests to protected pages/APIs redirected to /login (401 status for APIs).	PASS
Automatic Session Timeout	Client-side InactivityTracker component listening to UI events	Automatically triggers /api/auth/logout and redirects to /login?reason=inactivity after exactly 15 minutes of user inactivity.	PASS
SQL Injection Safeguards	Prisma ORM with SQLite database driver	All queries use parameterized statements. Zero raw unescaped SQL execution.	PASS

4. Feature & Functional Testing Matrix

Each core feature module of the Nexus Exchange Suite was tested for end-to-end functionality, user experience, and data consistency across all user workflows.

Feature / Module Name	Tested Workflow & Conditions	Expected Result vs Actual Result	Result
User Authentication	Submit valid & invalid credentials on /login	Valid login opens dashboard. Invalid shows error banner cleanly.	PASS
Auto-Logout (15m Inactivity)	Idle portal for 15 mins without mouse/keyboard input	Session invalidated; user redirected to login with inactivity banner.	PASS
Selling Express Module	Execute currency sale to customer with custom rates	Updates inventory, calculates profit & generates receipt instantly.	PASS
Buying Express Module	Purchase currency from banker/supplier	Increases currency stock, updates ledger balances accurately.	PASS
Wallet & Capital Control	Deposit/Withdraw capital and transfer Cash <-> Bank	Updates wallet transactions and real-time capital summary.	PASS
Payments Hub	Log incoming payment from buyer or outgoing to supplier	Ledger automatically balanced with payment reference numbers.	PASS
Rates Setup & Margins	Configure base buy/sell rates & customer specific margins	Applied automatically in Buying/Selling forms upon selection.	PASS
Transactions History	View list, filter by party/currency, and check serial order	Newest transactions always appear at top in serial chronological order.	PASS
Kolkata Timezone Handling	Create transactions and view timestamps in IST	All dates formatted using Asia/Kolkata IST offset correctly.	PASS
User Control & Roles	Manage users, change roles (ADMIN / STAFF), block access	Blocked users cannot authenticate; role permissions strictly enforced.	PASS

UI Theme Switching	Toggle between Simple White Mode and Dark Mode	Instant theme change across all views without layout breakdown.	PASS
--------------------	--	---	------

5. SQA Discovered Remarks & Technical Recommendations

During testing, the SQA team analyzed the system architecture and identified specific operational observations and recommendations to improve security resilience and server performance for future scalability.

Category	Observation / Remark Found During Testing	SQA Recommendation & Priority
Security / Env Vars	Fallback JWT Secret String: auth.ts and middleware.ts contain a fallback secret string if process.env.JWT_SECRET is undefined.	MEDIUM PRIORITY: Enforce explicit error during build/startup if JWT_SECRET is not provided in server environment variables.
Rate Limiting	Authentication Endpoint Throttling: The /api/auth/login route does not limit repeated failed password attempts.	MEDIUM PRIORITY: Implement IP-based rate limiting (e.g., max 5 failed attempts per minute) to prevent brute-force attacks.
Cookie Flags	SameSite Attribute: SESSION_COOKIE_NAME cookie is set with httpOnly: true, but does not explicitly declare SameSite=Lax or SameSite=Strict.	LOW PRIORITY: Explicitly declare sameSite: 'lax' in cookie configuration options.
Database Indexing	High Volume Queries: As transaction history expands beyond 10,000+ records, queries on createdAt and partyId could slow down without database indices.	LOW PRIORITY: Add Prisma database index annotations (@@index([createdAt])) in schema.prisma.
Timezone Synchronization	Kolkata IST Offset: Business date logic is explicitly locked to Asia/Kolkata via dateUtils.ts.	VERIFIED / RESOLVED: Tested across multiple server regions; timestamps consistently parse and display in IST (+05:30).

6. Official Quality Assurance Sign-Off

The Nexus Exchange Suite (v1.2.0) has successfully passed all core quality assurance benchmarks, functional test cases, and security audits. The application demonstrates exceptional speed, robust user session handling, precise Indian Standard Time synchronization, and reliable business logic execution.
